## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html).

The committee responsible for this document is ISO/TC 89, *Wood-based panels*, Subcommittee SC 1, *Fibre boards* and Subcommittee SC 2, *Particle boards*.

This second edition cancels and replaces the first edition (ISO 17064:2004), which has been technically revised with the following changes:

- the original terms for moisture resistant and humid conditions have been modified as shown in the new [3.5](#), [3.6](#), [3.14](#) and [3.15](#), where appropriate;
- minor modification has been made to [3.16](#) for high-humid conditions.

## Introduction

This document was originally prepared by Subcommittee SC 1, *Fibre boards*. Initially, a separate document (ISO/CD 17065) had been prepared by Subcommittee SC 2, *Particle boards*, to cover the definitions and terminology of particleboard, but as the work progressed, the subcommittee realized that, owing to many common terms, the best option was to combine the two documents. The work on the combined draft was carried out jointly by Subcommittees SC 1 and SC 2 and is contained in this document.

Product Standards have been prepared covering the classification and symbols for fibreboard, particleboard and oriented strand board (OSB).
